Marteloscopes inauguration. First trainings

- Marteloscopes in Spain: 8+4 → Fourth country after Germany (55), France (14) and Serbia (14)
- First trainings in 2022 → Support to the **forest managers (main organizers)**
- Same dynamic (~4h long, all in the site). Around 20 participants.
 - > Welcome and preliminary explanations
 - Integrate Network
 - Marteloscopes
 - Forest characteristics
 - > Practical exercise according to thresholds set by the managers. Split into groups (3 or 4).
 - > Results and discussion

Results and prospects

- Suggestions on software improvement:
 - > Add location to the map
- Positive feedback from participants.
- Better reception from education professionals. Interest expressed in establishing other marteloscopes.
- Prospects:
 - > **Engage educational institutions** (universities, forestry schools, highschoools and primary schools) even more. Could be an interesting tool for bringing forestry to the young for the first time, trying to fight the current extended misperception that chopping off a tree is an environmental crime, in other words, **narrow the gap between rural and urban conceptions of forestry**, which probably has never been bigger in Spain.
